

HAIR REMOVAL: Pre/Post Care

PRE-TREATMENT

Discontinue waxing, tweezing or plucking 3 weeks prior to treatment. Shaving is required 2 days before treatment.

A small 2-3 mm stubble of hair **MUST** be present for the treatment to be effective.

Notify your practitioner if you have any hormonal conditions, as these conditions tend to cause aggressive hair regrowth after laser treatment

Notify your practitioner if you have a history of perioral herpes.

Notify your practitioner of any medications you have used within the last 6 months.

IMMEDIATELY BEFORE TREATMENT

Remove any make-up and/or lotions and make sure that the skin is dry in the area to be treated.

POST TREATMENT

You may return to your normal daily activities immediately after your treatment.

Use of a broad spectrum UVA/UVB minimum of SPF 30 is very important after receiving any laser treatment. Remember to reapply throughout the day.

Avoid extended sun exposure or tanning for at least 1-week post treatment.

Continue a regiment of shaving through your course of treatments, 2 days before each treatment session, to ensure any remaining follicles are present at treatment.

To achieve the best results, complete the full treatment schedule at the intervals recommended by your laser practitioner.
